

APACHE SLING & FRIENDS TECH MEETUP 10-12 SEPTEMBER 2018

A better developer experience M. Chromiński, K. Panek, Cognifide

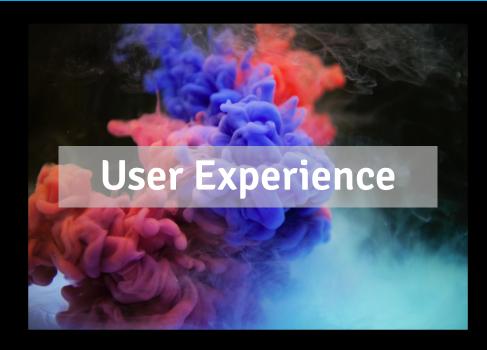

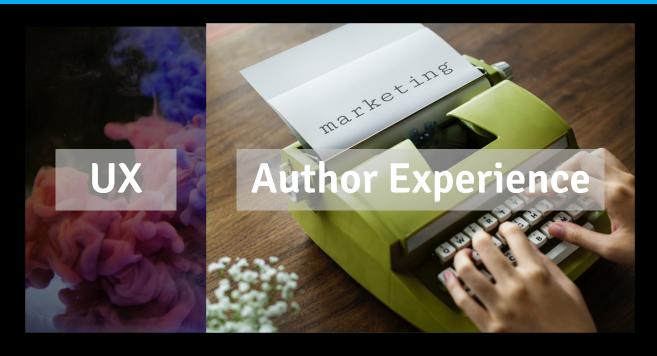

Experience

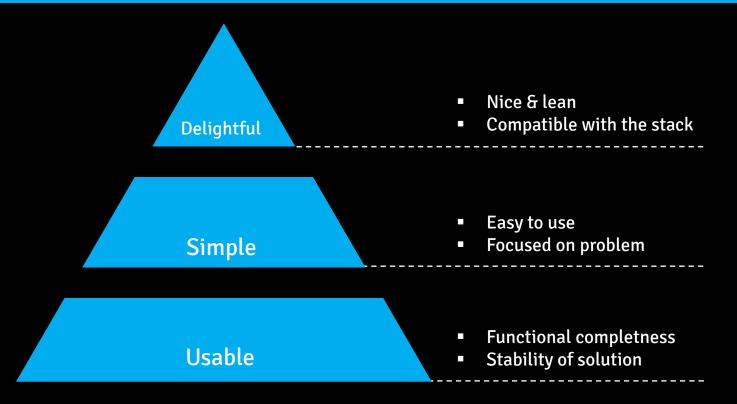

Developer's hierarchy of needs

Developer Experience on Assembly Lines

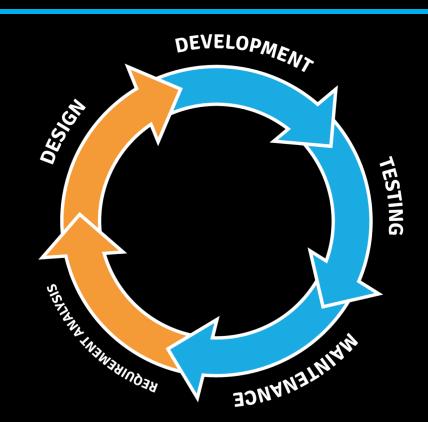

DX while building Sling based applications

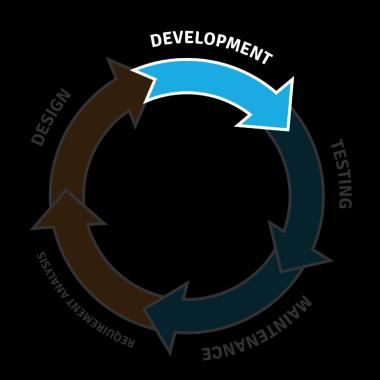

Software Development Life Cycle

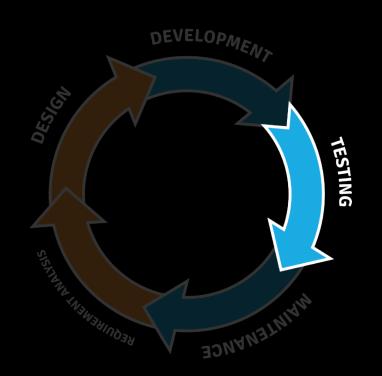

Development: typical activities

- Environment setup
- Application setup
- Code development
- Application build

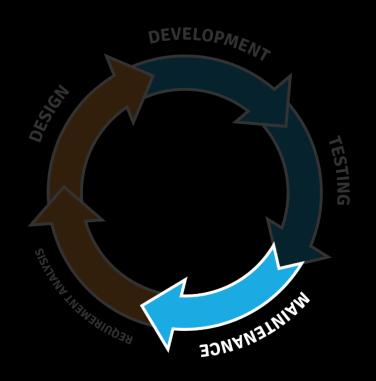

Testing: typical activities

- Manual testing
- Unit testing
- Functional testing
- Regression testing
- Static code analysis

Maintenance: typical activities

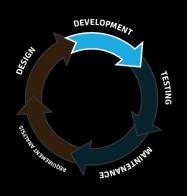

- Diagnostic & monitoring
- Issue reproduction
- Troubleshooting

Improvements

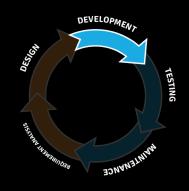

Environment setup: expectations

- Minimal time to run application
- Minimal manual steps
- Fast & reproducible environment
- Environment as a code

Environment setup powered by Gradle

Gradle AEM Plugin

- No virtualization → Native AEM performance
- Environment as a code → Easily maintainable
- Gradle based → Basic software prerequisites (JDK only)

https://github.com/Cognifide/gradle-aem-plugin

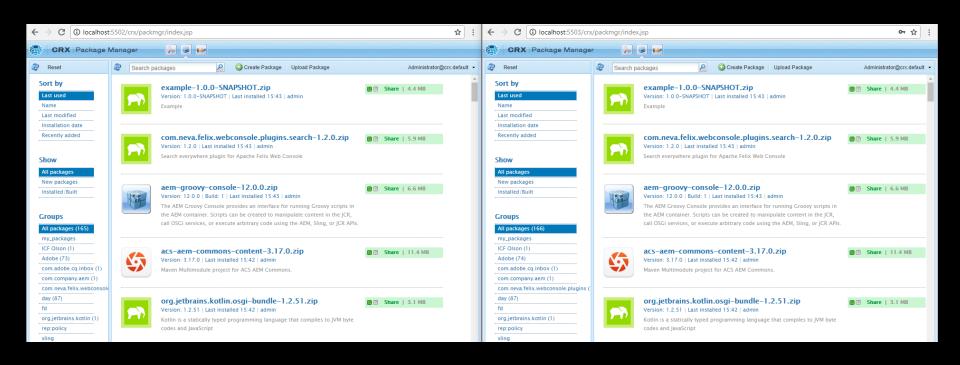

Environment setup: demo

https://youtu.be/7VG5AjpKZyo

Environment setup powered by Gradle

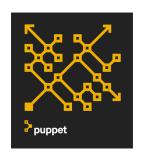

Environment setup: alternatives

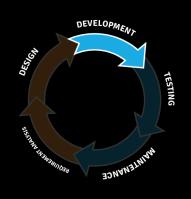

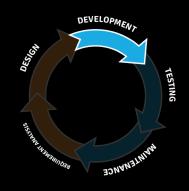

Application build: expectations

- Quick build time
- Intelligent & interactive
- Perfectly integrated
- Well customizable

Application build powered by Gradle

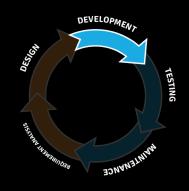

Gradle AEM Plugin

- Incremental build → 2-3x faster comparing to Maven
- Instance health checking → Notifications when up&running
- Automated dependencies deployment → Self-sufficient dev

https://github.com/Cognifide/gradle-aem-plugin

Application build powered by Gradle

Gradle AEM Plugin

- Very useful for building AEM applications
- Optionally useful to set up AEM environments

https://github.com/Cognifide/gradle-aem-plugin

Application build: demo

https://youtu.be/sEUn2-uxlog

Application build: alternatives

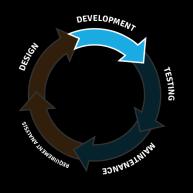

Gradle plugin CQ Package

Gradle for Sling - now available

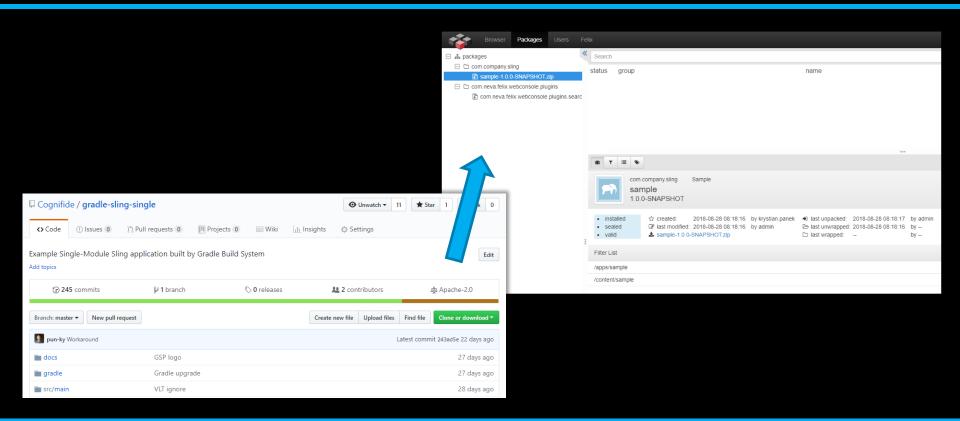

GradleSling Plugin

Fork of Gradle AEM Plugin that includes all it's features

https://github.com/Cognifide/gradle-sling-plugin

Gradle for Sling - all-in-one demo:

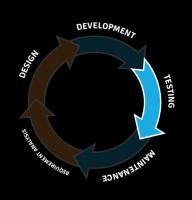

Gradle for Sling: demo

https://youtu.be/sEUn2-uxlog

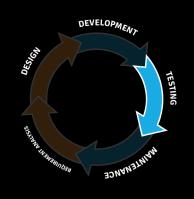

Regression testing: expectations

- Focus on change
- Shield against change by accident
- Test quickly
- Reduce human testing

Regression testing powered by AET

- Configurable website monitoring → Find unwanted changes
- Scalable → Testing all volume platforms
- Various comparators → Testing change wide

https://github.com/Cognifide/aet

Regression testing: demo

https://youtu.be/8Zpn7LGeV98

Regression testing: alternatives

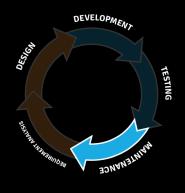

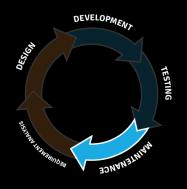

Troubleshooting: expectations

- Easy way to find source of bug
- Easy issue reproduction
- See actual code instead of just version

Troubleshooting with Search Plugin

Search Web Console Plugin

for Apache Felix

- Single JAR to deploy → Immediate way to discover runtime
- Decompile & search → Finding bug root cause
- Assemble OSGi bundles → Debugging at breakpoint

https://github.com/neva-dev/felix-search-webconsole-plugin

Troubleshooting: demo

https://youtu.be/6UH0U5uNvU4

Troubleshooting: alternatives

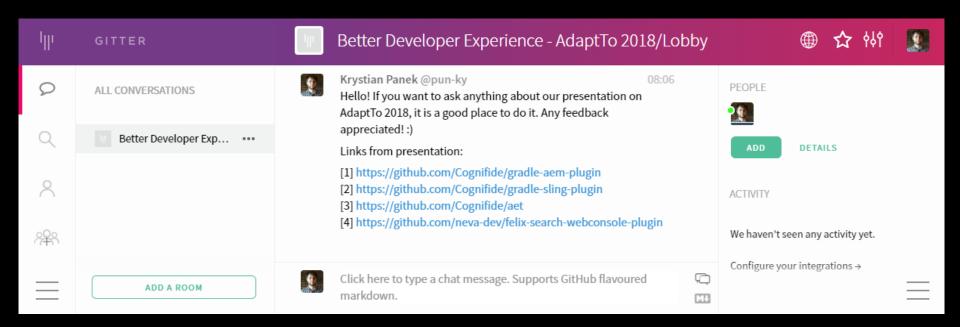

Summary

Feedbacks, support and more
